# How do I customized the panel header text?

Date : September 16, 2015

Your panel header's font, size, color, and other properties can be changed in the Panel editor.
You can even make changes to the header content of the text itself, such as changing the heading from 'Faculty' to 'Staff.'

To edit the header in the **Panel hover**, ensure that your are on **Advanced** mode, then click the **Header tab.**
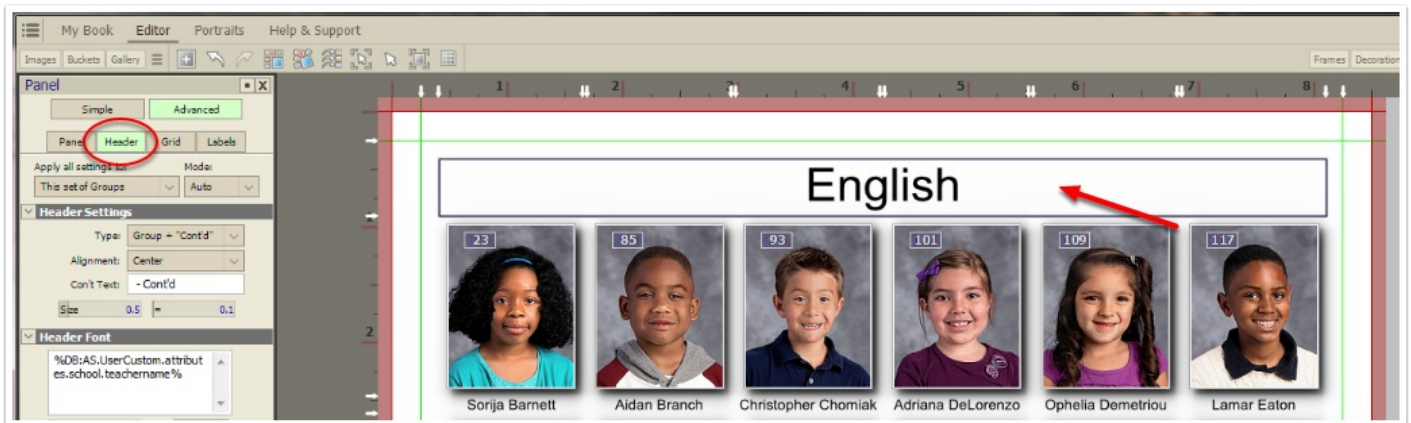

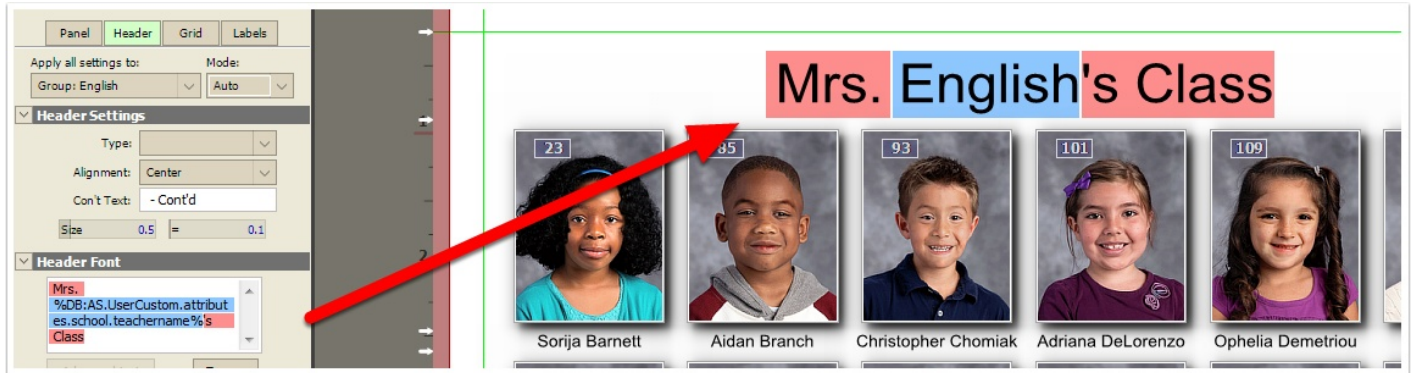

Use the **Header Settings** to change the format of the header, as well as the alignment and size of the header frame.
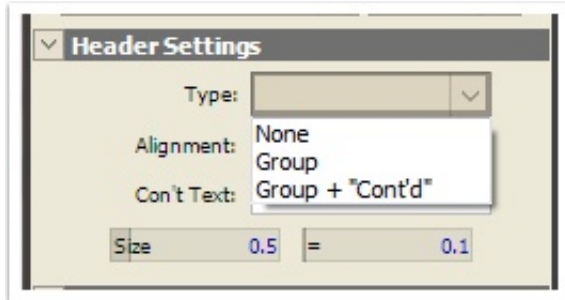

Click on the **Tags** button to modify what information appears in the header. Navigate to the **User Custom Tags** section, then **School** - you'll find your database fields available to use.
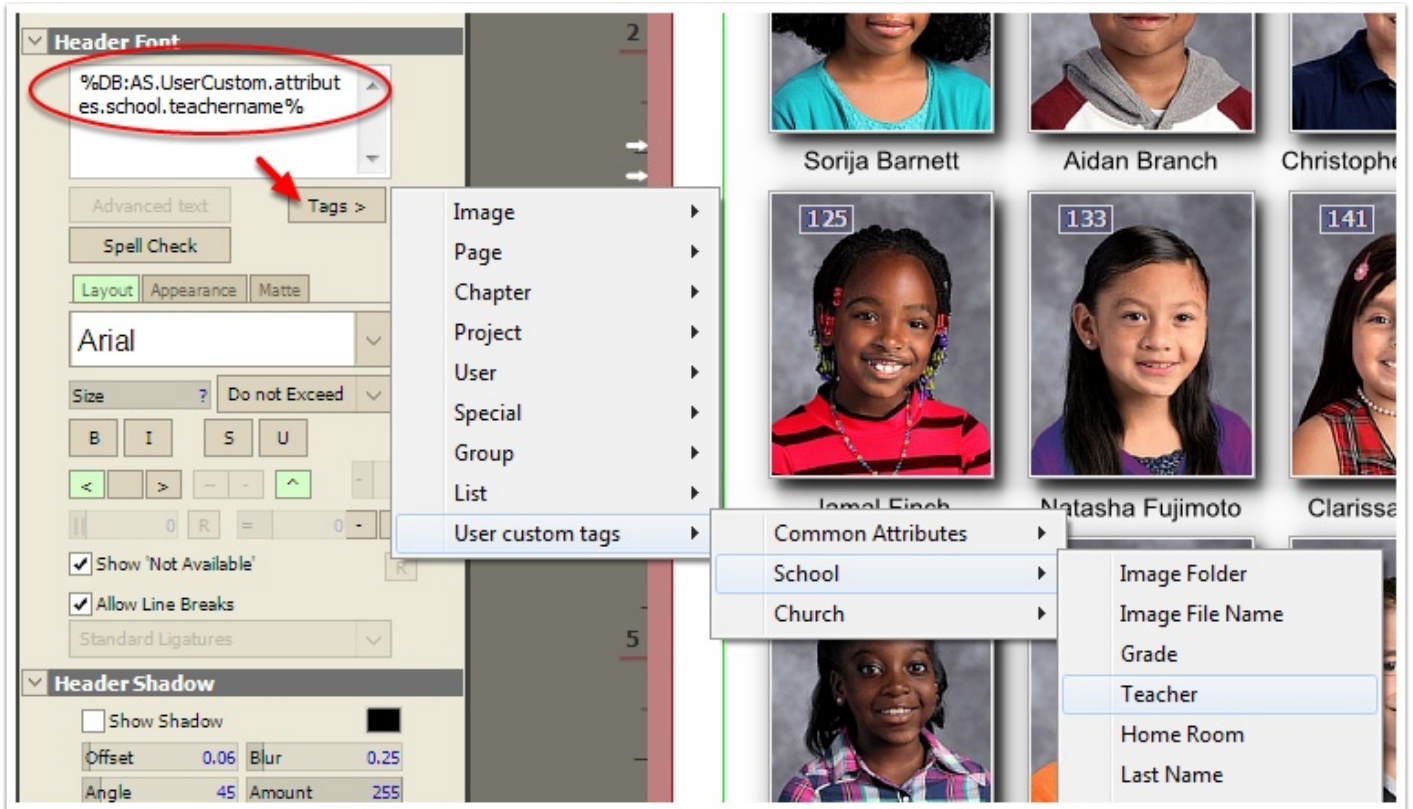

You can also type custom text directly into the Header font.
In this example, we've inserted the words *Mrs.* and *'s Class* around the tag.

REMINDER: If you do not want to make changes to all headers of all of the groups in the panel section you are editing, ensure that you have selected the specific group you want to edit under "Apply All settings to:"

Use the **Header Font Tabs** to change the font, size, color, emphasis and general appearance of the header.

Use the **Header Shadow** to add a shadow to the header, or change its color.
